Professional Summary

Product engineer who takes systems from idea to shipped reality — spanning backend architecture, testing, CI/CD, and AI integration. I build AI-native applications and automate real-world workflows end-to-end, and I move fast by pairing strong system design with modern engineering practices.

Selected Projects

AI Coach — AI-Powered Coaching Platform (*building toward launch*)  GitHub

- Designing and building an end-to-end AI coaching platform (Next.js, Supabase/PostgreSQL, LLM APIs) that turns persistent user data into personalized, explainable recommendations.
- Architected the system to separate deterministic computation from LLM-based reasoning, with structured outputs, database-backed memory, and secure auth — built as a full product, not a demo.

Atlas — Backend API System  GitHub

- Built a modular backend API (FastAPI, PostgreSQL, SQLAlchemy 2.0, Alembic) with JWT/OAuth2 authentication, password hashing, and ownership-based authorization on protected endpoints.
- Set up an automated test suite (pytest, pytest-cov, FastAPI TestClient/HTTPX) and a GitHub Actions CI pipeline that provisions PostgreSQL, runs migrations, and runs tests on every push; containerized with Docker Compose with automatic startup migrations.

ThreatMap — Open-Source Security Assessment Engine (*v1.0, Open-Source*)  GitHub

- Architected and open-sourced a terminal-first engine orchestrating Nmap, Nuclei, Nikto, Gobuster, Subfinder, and SSLScan through parallel execution pipelines, **automating 90%+** of a manual assessment workflow.
- Added local AI-based triage to prioritize findings and automated HTML/Excel/JSON reporting; released publicly and adopted by other users.

Win_Forensics — Windows Digital Forensics Toolkit  GitHub

- Reverse-engineered Windows application encryption workflows, analyzing DPAPI-protected keys and AES-OFB encrypted SQLite databases.
- Built a forensic parser producing structured JSON output and packaged the toolkit as a portable executable for field use.

Social Data Automation Pipeline — Cross-Platform Integration System  GitHub

- Built Python pipelines that pull data from external platform APIs, deduplicate and normalize records, and sync results into MySQL and Google Sheets.
- Automated end-to-end execution through Dockerized, scheduled workflows for reliable, unattended runs.

Experience

Intern — AbyM Technologies Feb 2026 – May 2026
Remote, Noida, India

- Ran structured vulnerability assessments across **7–8** internal web services using automated scanning pipelines; classified and prioritized security weaknesses before production deployment.
- Partnered with infrastructure teams to document remediation workflows and implement security controls, reducing exploitable attack surface across live systems.

Intern — National Cyber Forensics Lab (IFSO), Delhi Police Jul 2025 – Oct 2025
Delhi, India

- Conducted digital forensic analysis on Windows endpoints — registry hives, event logs, and filesystem artifacts — to support active criminal investigations.
- Built Python automation scripts that **automated 80%+** of forensic artifact collection and log analysis; **received a formal Appreciation Letter from Delhi Police** for the work.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, Bash

Backend & APIs: FastAPI, REST APIs, SQLAlchemy, Pydantic, Uvicorn, Alembic

Databases: PostgreSQL, MySQL, Supabase

Testing & CI/CD: pytest, pytest-cov, HTTPX, FastAPI TestClient, GitHub Actions

AI: LLM APIs, Prompt Engineering, AI Application Architecture, Deterministic + AI System Design

Frontend: Next.js, React, Tailwind CSS

DevOps: Docker, Docker Compose, Linux, Git, GitHub

Security: Security Automation, Vulnerability Assessment, Application Security

Education

Vivekananda Institute of Professional Studies, Delhi 2026
Bachelor of Technology in Computer Science & Engineering (Industrial IoT) — CGPA: 7.83/10
